

Pick up dog doo. Protect streams.

Dog doo can pollute stormwater. Rain and melting snow flows across yards and trails, collecting in stormdrains that lead directly to streams (without being treated!)

Bacteria Problems

A single gram of dog doo can contain 23 million fecal coliform bacteria and can spread diseases like Giardia and Salmonella. Bacteria from dog doo accounts for up to 20% of the bacteria in urban waterways.

Nutrient Problems

Nutrients like nitrogen and phosphorus that are found in dog doo act like a fertilizer in streams. They cause algae to grow which reduces the available oxygen for fish. The more poop, the bigger the potential problem. Locally there are **90,000** dogs that make **11,700** tons of poop a year.

Be a "Doo Gooder"

You can make a difference by being a responsible pet owner/guardian. Being a "Doo Gooder" means being a model for others and picking up your dog doo. Here are **5** tips every Doo Gooder should know:

- Be prepared: carry poop bags with you.
- Take extra bags so you don't run out (and you can help someone in need).
- Make sure the bag ends up in a trash can.
- When you hike, never leave a bag on the trail there's nobody designated to pick them up!
- Pick it up at home (or hire someone to do it) to keep your yard healthy and to protect streams.

PICK IT UP

Dog waste has been cited as the **3**rd largest contributor of bacterial pollution in urban watersheds. Keep the poop from washing into stormdrains. Pick it up and Keep it Clean!
